## FastReport Crack + Keygen Full Version

FastReport is a professional, easy-to-use tool for generating elaborate and professional reports. With it, you can create a variety of reports in a few steps. It combines wizard-like learning curves with technical authoring capabilities. A versatile, fast, and intuitive workspace The program's interface is divided into a toolbar and a workspace. The workspace is made up of fields and preview views, among which you can find a report edit dialog, a drag and drop functional window, and three types of preview views (table, graphic and page). These help you to insert or modify any element of your project. Upon choosing a type of element from the structure field, you can use an associated preview view to insert or modify it. For example, the table preview view allows you to insert or modify a table. It also allows you to create new tables or to edit the tables you already have. A large variety of visual elements FastReport has a wealth of visual elements that include formulas, pictures, charts, images, and frames. The image gallery allows you to insert images in your project and edit them, and the frame allows you to create customized frames within your project. Using the tables preview view, you can insert, modify or delete tables. Similarly, the frame allows you to insert frames in your project. You can use formulas, pictures or text to be inserted into the table in any of its tabs, and this can be modified by double-clicking it. Scripts and wizards The program provides a built-in script editor that allows you to modify elements, such as variables, code and parameter properties, and data type of your tables. The script editor allows you to write scripts that can be incorporated into any element, such as, for example, into a picture. Wizards are specially developed elements that allow you to insert elements or modify elements, such as pictures or variables, with the least amount of code. Advanced drag and drop and scripting functions The program allows you to use a drag and drop function to easily modify any element of your report. To do this, you need to drag the element on the workspace or on a preview view, and then drop it on the report. With this function, you can perform a host of actions such as copying, deleting, moving or applying effects to the selected element. In addition, the program is designed to help novice users: it offers a huge array of wizards, allowing you to insert or modify tables
